jquery
Posted February 22nd, 2024

jquery is a javascript library that simplifies DOM management.
Basic Jquery Cheatsheet:

Get it from:
https://jquery.com/download

Run on Load
```
<script>
$(document).ready(function() {
});
</script>
```

Reference a type (e.g. a button)
```
$("typename").addClass("foo");
```

Reference a class:
```
$(".classname").addClass("foo");
```

Reference an id:
```
$("#idname").addClass("foo");
```

Functions:
----
css - add css rule to element
   Sample $(#myid).css('background-color','red');
   Note that its a comma between elements, not a colon
addClass - adds a class to an element
removeClass -removes a class from an element
html - sets body of element
text - set element text without evaluating
remove - removes an element
appendTo - appends selected element to new target
     Sample: $("#myid").appendTo("#target2");
clone - create a clone
     Sample: $("#myid").clone().appendTo("#target2");
parent - finds parent element of element selected.
children - finds children elements of element selected.
nth-child - finds nth child of element
